DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of group 1, claims 1-9 in Paper No. 3 is acknowledged.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Clark (2,230,560).

Clark teaches an apparatus for reshaping a container, comprising a press block (54, 55), a die block having a design (51); wherein the press block and the die block located on each side of the container's sidewall (Figs. 4-5, 51, 54, 57), pressing means (50; col. 2, lines 33-43) for urging the press block and the die block toward each other to reshape and produce an embossed portion of the sidewall, wherein the press block has an active press surface (end surface of the block 54) and a passive press surface (along the side surface of the block 54), wherein the active press surface form a contour at the end of the container sidewall (col. 2, lines 37-39) and the passive press surface is peripheral to the active press surface; and wherein the die block has a die support surface (lower surface of the die 51) which is peripheral to the recess of the molding surface.

Art Unit: 1722

4. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Bock (4,896,415).

Bock teaches an apparatus and method for forming container, comprising a press block (55) and a die block (51) having a recessed die cavity (52) corresponding with an active press surface (56) of the press block, wherein the press block (55) and the die block (51) located on each side of the container sidewall (50), means (53, 55) for urging the press and die block toward each other and against the container wall to form a recess thereon; and wherein the die block having support surface (51) peripheral to the recessed die cavity and corresponding to a passive press surface of the press block (55).

Allowable Subject Matter

5. Claims 7-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to teach or suggest a pressing means comprises a pair of actuator arms operably connected to each other at a hinge joint, with each arm extending from the hinge joint to an output end, which is connected to a corresponding one of the press and die block; and means for pivoting the actuator arms about the hinge joint and relatively toward each other.
